## Battery Education

Choose the best battery for your device.

In simple terms, batteries come in two basic types: single-use and rechargeable. Single-use batteries, also known as primary batteries, have one life cycle and must be replaced when drained. Examples include alkaline, zinc-carbon, silver-oxide and zinc air. Rechargeable batteries, also known as secondary batteries, can be recharged and used repeatedly. Examples of rechargeable batteries include nickel-metal hydride (NiMH), nickel cadmium (NiCd), lithium ion (LiIon) and sealed lead acid (SLA) batteries.

# Lights Education

L.E.D. vs Incandescent. | Based on 200 hours of service

**2AA Incandescent**  
**12 Bulbs**  
**234 AA Batteries**

Estimated cost  
**\$175.00**

**2AA LED**  
**0 Bulbs**  
**6 AA Batteries**

Estimated cost  
**\$7.00**

## What is an L.E.D.?

L.E.D. stands for Light Emitting Diode. It's not a bulb; it does not use a filament. It's plastic with a phosphorous coating and metal conductor that produces light.

Measures of Comparison.

Watts: Measures the electrical power consumed by a light. The higher the watts the greater the power consumption.

Lumens: The "standard" in light output. The higher the lumens the brighter the light.

## ANSI

(American National Standards Institute)

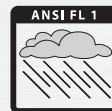

**Lumens:**  
 A measure of the total power of light emitted. The higher the number, the brighter the light.

**Beam Intensity:**  
 Maximum luminous intensity typically along the central axis of a cone of light.

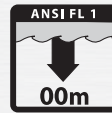

**Run Time:**  
 The length of time the flashlight will run with the batteries provided.

**Water Resistant:**  
 Water splashed against the device from any direction shall have no harmful effects.

**Impact Resistance:**  
 The degree to which a device resists damage from dropping on a solid surface.

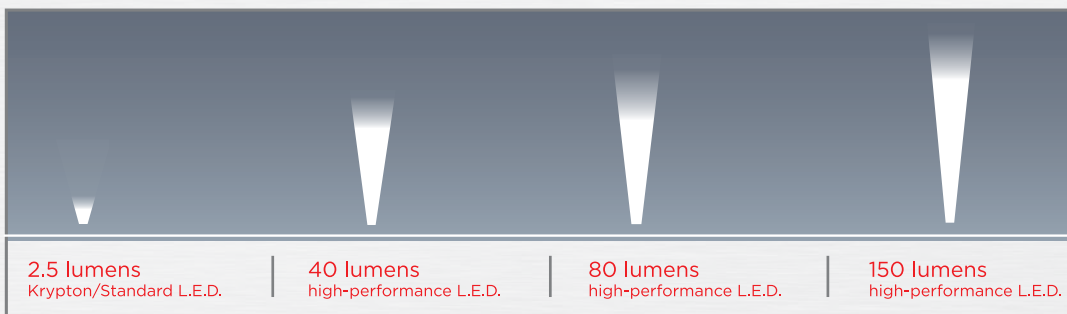

**Water Proof/Submersible:**  
 Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is temporarily immersed in water under standardized conditions of pressure and time.

**Beam Distance:**  
 A measure of how far from the device the beam of light reaches.
