# HSS JOBBERS LENGTH DRILLS $118^{\circ}$ POINT 

## DWDN Series - Surface Treated Economy

D/AN Series - Surface Treated Premium Quality
A dependable, general purpose drill designed to perform in a broad range of materials in the iron and steel families. Ideal for production, maintenance or portable drilling jobs. Surface treated with abrasion-resistant black oxide.

## DWDP Series - Polished Economy

## D/AP Series - Polished Premium Quality

A dependable, general-purpose drill used for a variety of materials. Ideal for production, maintenance or portable drilling jobs. Bright finish, which provides superior chip evacuation.

## DWDSP Series - Economy

## D/ASP Series - Premium Quality

Manufactured to National Aerospace Standard 907, these drills are ideal for portable or machine drilling of low tensile strength alloy materials. They have a black oxide surface treatment that is abrasion resistant, reduces chip welding and improves chip flow. The $135^{\circ}$ split point is self-centering and reduces thrust.

## BLACK \& GOLD

DWDBG Series - Economy
KFD Series - Premium Quality
Manufactured from premium grade high speed steel, Killer Force Drills have a heavy duty $135^{\circ}$ split point for self-centering and reducing thrust. Black and Gold surface treated for use in stainless steel and other hard metal drilling.

## COBALT JOBBERS LENGTH DRILLS $135^{\circ}$ SPLIT POINT

DWDCO Series - Economy

## D/ACO Series - Premium Quality

Manufactured to National Aerospace standard 907. Made of heat resistant cobalt, they display higher red hardness which permits speeds upto $30 \%$ greater than high speed steel drills and are especially effective in drilling tough, high tensile strength materials like PH stainless steel, inconel, and titanium. The $135^{\circ}$ split point is self-centering and reduces thrust. Sizes smaller than $1 / 16$ have the $118^{\circ}$ standard point.

## COBALT METRIC JOBBER DRILLS $135^{\circ}$ SPLIT POINT <br> D/AMMCO Series - Metric Cobalt <br> 

Manufactured to National Aerospace standard 907. Made of heat resistant cobalt, they display higher red hardness which permits speeds upto $30 \%$ greater than high speed steel drills and are especially effective in drilling tough, high tensile strength materials like PH stainless steel, inconel, and titanium. The $135^{\circ}$ split point is self-centering and reduces thrust. Sizes smaller than 2 mm have the $118^{\circ}$ standard point.

## HSS TIN-COATED JOBBER DRILLS $118^{\circ}$ POINT

DWDTN Series - TIN Coated
Superhard titanium nitride surface treatment improves drill life, chip ejection, and productivity; decreases horsepower requirements. Ideal for hard metals, work hardened stainless and other difficult to drill materials.

# HSS LEFT HAND JOBBER DRILLS $118^{\circ}$ POINT <br> $118^{\circ}$ 

DWDLH Series - Left Hand
General purpose drill construction. Features a left hand helix for screw machine applications where spindles rotate counterclockwise. Left hand drills can also be used to drill out broken bolts.

## SCREW MACHINE LENGTH DRILLS $135^{\circ}$ POINT

## DWDST Series - High Speed Economy

## D/AST Series - High Speed Premium Quality

Manufactured to National Aerospace Standard $907.135^{\circ}$ split point is self-centering and reduces thrust. Ideal for portable or machine drilling. Short, rugged construction performs well in a broad range of materials in the iron and steel families. Screw machine drills are popular in the automotive and construction industries. They are often used in screw machine setup where spindle clearance is limited. Sizes smaller than $1 / 16^{\prime \prime}$ or $\# 52$, and larger than $1 / 2^{\prime \prime}$ have the $118^{\circ}$ standard point.

## D/ASTCO Series - Cobalt Premium Quality

Manufactured to National Aerospace Standard $907.135^{\circ}$ split point is self-centering and reduces thrust. Ideal for portable or machine drilling. Short, rugged construction performs well in high tensile strength materials like PH stainless steel, inconel, and titanium. The $135^{\circ}$ split point is self-centering and reduces thrust. Sizes smaller than $1 / 16$ have the $118^{\circ}$ standard point.

## KFD MECHANICS LENGTH DRILLS $135^{\circ}$ POINT

KFDML Series - KFD Mechanics Length
Manufactured from premium grade high speed steel, Killer Force Drills have a heavy duty 135 split point for self-centering and reducing thrust. Gold and black surface treated for use in stainless steel and other hard metal drilling.

# SOLID CARBIDE DRILLS $118^{\circ}$ POINT 

## DMOD Series - Solid Carbide Drills

Solid carbide drills are designed for drilling abrasive materials when drilling accuracy must be maintained and/or when used in high temperature drilling applications. Solid Carbide drills are used on materials such as cast iron, the non-ferrous alloys, high silicon aluminum, copper, plastics, bronze, hard rubber, plexiglass, and other similar materials.

## DIE DRILLS

D/ADIE Series - Carbide Tipped Die Drills

## $\star \star \star$ Drill America $\star \star \star$

Run at 75 to 100 surface feet per minute with steady hand feed. It is good practice to clear the drill from the hole to allow coolant to wash away the chips. Designed for drilling hardened steels in the range of $45-65$ Rc. Note: Sizes under 11/64" are solid carbide spade construction.

# CARBIDE TIPPED JOBBER DRILLS $118^{\circ}$ POINT 

D/ACT Series - Carbide Tipped

Features heavy-duty construction and heat treated body for optimum wear resistance and support of the carbide tip. Used in the production of cast iron, non-ferrous metals, and many composite materials such as hard rubber or copper alloys. NOT recommended for drilling steel.

# HSS REDUCED SHANK DRILLS 

## DWDRSD Series - High Speed Steel Economy

## D/ARSD Series - High Speed Steel Premium Quality

Made of HS Steel and ground to a $118^{\circ}$ point. These drills expand the size range capacity of a portable drill chuck. Common flute and overall length for minimal adjustment during tool changes. Precision ground for high degree of concentricity between shank and body diameter. Ideal for drilling in low and medium tensile strength materials.

# HSS 3-FLAT REDUCED SHANK DRILLS 

## D/A3F Series - 3 Flat S\&D

## KFDRSD Series - Black and Gold S\&D

Made of HS Steel, these drills expand the size range capacity of a portable drill chuck. Common flute and overall length for minimal adjustment during tool changes. Precision ground for high degree of concentricity between shank and body diameter. Ideal for drilling in low and medium tensile strength materials.

## COBALT REDUCED SHANK DRILLS

## DWDCO Series - Economy

Made of heat resistant cobalt and ground to a heavy duty $135^{\circ}$ split point. Common flute and overall length for minimal adjustment during tool changes. Precision ground for high degree of concentricity between shank and body diameter. Ideal for drilling in tough, high tensile strength materials.
D/ACO Series - Premium Quality
Expands the size range capacity of a portable drill chuck. Common flute and overall length for minimal adjustment during tool changes. Precision ground for high degree of concentricity between shank and body diameter. Ideal for drilling in low and medium tensile strength materials.

## 6" AIRCRAFT EXT. DRILLS

## DWDA/C Series - High Speed Steel Economy

## D/AA/C Series - High Speed Steel Premium Quality

Manufactured to National Aerospace Standard $907.135^{\circ}$ split point is self-centering and reduces thrust. Ideal for drilling in mild steels where extra length for reach is required. They have a black oxide surface treatment that is abrasion resistant, reduces chip welding and improves chip flow. Sizes smaller than \#52 and $1 / 16$ have the $118^{\circ}$ standard point.

## GLBCO Series - Cobalt

Manufactured to National Aerospace Standard 907. Made of heat resistant cobalt, the $135^{\circ}$ split point is self-centering and reduces thrust. They are especially effective in drilling tough, high tensile strength materials like PH stainless steel, inconel, and titanium.

# CARBIDE TIPPED MASONRY DRILLS 

DAM Series - Masonry Drills
Engineered with wide flutes to provide fast dust removal in softer materials. Designed for drilling in brick, concrete, and sandstone. Carbide tips brazed to tough steel bodies and are larger than the nominal drill size to provide clearance for installation of anchor screws, expansion shields and toggle bolts. Designed for use in portable electric drills.

## SDS DRILLS

## SDS Series - SDS Drills

SDS Plus shank hammer bits are especially suited for drilling in stone or concrete.

## CONRETE SCREW ANCHOR DRILLS

DAM Series - DAM Tapcon Drills
Screw anchor bits insure precise drilling of pilot holes when installing Tapcon anchors.

* Sold in Standard Packages of 10.

SDS Series - SDS Tapcon Drills
SDS Shank screw anchor bits allow for drilling pilot holes when installing Tapcon anchors using an SDS hammer drill.

# HSS TAPER SHANK DRILLS 

DWDTS Series - Taper Shank Drills
Made to fit Morse tapered holders. Designed to perform in a broad range of materials in the iron and steel families. They have a black oxide surface treatment that is abrasion resistant, reduces chip welding and improves chip flow.

## TAPER SHANK DRILLS

DWDTSCT Series - Carbide Tipped Taper Shank Drills
Features heavy-duty construction and heat treated body for optimum wear resistance and support of the carbide tip. Designed for drilling in cast iron and non-ferrous metals. NOT RECOMMENDED FOR DRILLING STEEL.

DWDTSCO Series - Cobalt Taper Shank Drills
Made of heat resistant cobalt. Engineered with heavy-duty contruction to perform well in tough, hard-to-machine materials. Notched Point.

# TAPER LENGTH DRILLS 

DWDTL Series - H.S.S. Taper Length Drills

Designed for general purpose drilling where a length longer than Jobber Length is required. Performs under a variety of normal conditions and in a broad range of materials in the iron and steel families.

DWDTLCO Series - Cobalt Taper Length Drills
Made of heat resistant cobalt. Features $135^{\circ}$ heavy-duty construction for drilling in tough alloy steels, forgings, and castings.

DWDTLCT Series - Carbide Tipped Taper Length Drills
Features heavy-duty construction and heat treated body for optimum wear resistance and support of the carbide tip. Particularly advantageous when length longer than Jobber Length is required. Used in production drilling of cast iron, non-ferrous metals, and many composites. Tanged shank allows for use with ASA split sleeve drivers. NOT RECOMMENDED FOR DRILLING STEEL.

# TAPER LENGTH DRILLS 

# H.S.S. LONG BOYS EXTRA LONG DRILLS 

## DWDDL Series - Long Boy Drills

For general purpose drilling in applications where extra length for reach is required, designed to perform in a broad range of materials in the iron and steel families.

## T/A Series - High Speed Hand Taps

Hand Taps are the most versatile taps for hand use, or for tapping under power. Hand Taps are popular for use in general machine tapping or CNC tapping. They are also appropriate for tapping the vast majority of materials in through or blind holed conditions. Taper Style - Starts the thread square with the workpiece. Plug Style - Generally used in thru holes. Bottom style - Generates the thread to the bottom of the hole.

## HSS SPIRAL POINTED TAPS

## DWT Series - High Speed Gun Taps

Spiral-Pointed taps, or Machine Taps, were originated to solve the problem of tap breakage in through hole tapping. The Machine Tap shoots chips ahead of the cutting action, thus reducing loading and clogging in the flutes. They are recommended for use in through or blind holes which allow for chip accumulation in the bottom of the hole. Ideal for threading a wide variety of ductile materials, copper and copper alloys, brass and non-metallics.

# CARBON STEEL HAND TAPS 

## DWT Series - Carbon Steel Hand Taps

Carbon Steel Hand Taps are used to re-thread damaged and/or jammed threads. Carbon Steel Hand Taps may also be used to thread mild steels. Taper Style - Starts the thread square with the workpiece. Plug Style - Generally used in thru holes. Bottom style - Generates the thread to the bottom of the hole.

## P ULLE Y TAPS

DWTET Series - High Speed Pulley Taps

Extension Taps are used for tapping the hubs of pulleys for oil caps or set screws. The long shank is also ideal for reaching holes inaccessible with standard length taps. Extension Taps are furnished in several different overall lengths. Available in PLUG chamfer only.

DWT Series - High Speed NPT Taps

National Pipe Taper Taps are appropriate for threading a wide variety of materials both ferrous and non-ferrous. The nominal size of a Pipe Tap is that of the pipe fitting to be tapped, not the actual size of the tap. The thread tapers $3 / 4$ of an inch per foot. All Pipe Taps furnished with a $2-1 / 2$ to $3-1 / 2$ thread chamfer. NPT threads require the use of a "sealer" like teflon tape or pipe compound.

## H.S.S. I NTERRUPTED THREAD

Special Purpose Pipe Tap, appropriate for threading a wide variety of materials both ferrous and non-ferrous where chip disposal is a problem. The first few threads on an Interrupted Thread Pipe Tap are full. The balance of the threads are interrupted to reduce drag while taper pipe threading. These pipe taps are standard having an odd number of flutes.

## H.S.S. NPSTAPS

National Pipe Straight Taps marked NPS are suitable for tapping holes, or couplings, for low pressure work to assemble with taper threaded pipe or fittings to secure a tight joint when a sealer is used. They are suitable for NPSC and NPSM work.

T-HANDLETAP WRENCHES
DWTD Series - T-Handle Tap Wrenches

## TAPS \& DIES

DWT Series - Acme Taps
Single pass acme taps produce threads from $10^{\circ}$ to $30^{\circ}$ in a single pass without a lead screw.

DWT Series - Hex Dies
Carbon Steel Hex Dies are for dressing over bruised or rusty threads, they are the most cost effective rethreading tool available. No special holder is required for this type of die, any wrench large enough will
 suffice. Ideal for maintenance in the shop or field.

# ROUND DIES 

## H.S.S. ROUND STANDARD SIZES

 DWT Series - High Speed Adjustable Round DiesFor threading, a High Speed Steel Round Adjustable Die is desired for improved wear life. Round Dies are chamfered on both faces. One side has a 2 to 3 thread chamfer for threading, the other side has a 1 to 1-1/2 thread chamfer for threading close to a shoulder. Adjustment is obtained by a fine pitch screw which forces the sides of the die apart, or allows them to spring together. The slot is beveled so that when the dies are used in a machine holder the adjusting screw can be removed and adjustment made by the adjusting screws in the holder.

## COUNTERBORES

DEWCBR Series - H.S.S.
Counterboring is the enlargement of a portion of a hole that has previously been formed. If the counterbored portion is shallow (1/8" or less), the operation is usually known as spot-facing; for example, a flat seat for a bolt head or nut. If, on the other hand, the hole is enlarged to a considerable depth, it is designated as counterboring. These counterbores are made of two-piece construction, having an integral shank and counterbore-cutter, and a pilot that is interchangeable, which provides flexibility in the use of the tool

## STRAIGHTSHANK GIDCHOTREH'M

$\square$ *Pilots can be found on page 73.

## SOLID COUNTERBORES

For fillister head cap screws.

## H.S.S. COUNTERSINKS

DEWSFC Series - Single Flute Countersinks

Single flute countersinks are ideal for chambering, deburring, and countersinking. They provide a smooth finish on a variety of materials.
DEWCSK Series - 3 Flute Countersinks
3 - Flute center reamers are designed for countersinking holes for centers or for enlarge existing holes.
DEWMSK Series - 4 Flute Countersinks
4 - Flute countersinks or machine countersinks are designed for countersinking holes for centers or for enlarge existing holes.

## DEWCHAT Series - 6 Flute Countersinks

6 - Flute or chatterless countersinks are designed to provide more metal removal then the 1,2,3, \& 4 flute countersinks. They are also more effective on harder materials.

## THREADED SHANK COUNTERSINKS

## TSC Series - H.S.S.

Countersink cutters may be used in all popular adjustable or micro-stop countersinking units utilizing a $1 / 4$ "-28 threaded shank drive. Made from the finest high speed tool steel. Precision ground to exacting tolerances and form relieved to insure concentricity of $100^{\circ}$ countersink angle.

## THREADED SHANK DRILLS

## TSD Series

Type "D" adapter drills are made from M42 8\% cobalt high speed steel and are manufactured to NAS 965 Type "D" specifications with $135^{\circ}$ heavy duty split point and surface treated for drilling hard, tough, high tensile strength materials. When drilling low tensile strength materials, the Type "D" cobalt drill will have significantly greater tool life than the NAS 965 Type "B", high speed steel adapter drill, resulting in a much lower cost per hole.

## CHUCKING REAMERS

DWRR Series - H.S.S. Straight Shank Straight Flute DWRRSP Series - H.S.S. Straight Shank Spiral Flute
Chucking Reamers are designed for accurate reaming in most materials using all types of equipment including screw machines, turret lathes, drill presses, and machining centers. They are regularly pointed with a $45^{\circ}$ chamfer. The straight-flute design is recommended for most general purpose reaming. The right-hand spiral-flute reamer has the smooth, chatter-free action necessary for fine finishes. It is recommended over the straight-flute for more difficult materials, better surface requirements, and applications with an interruption such as a keyway or cross hole.

# H.S.S. MACHINE EXPANSION REAMERS <br> DWRRE Series - Straight Shank <br> c|uCH(6)TECH" <br> DWRRETS Series - Taper Shank <br> An economical high production reamer. Expansion feature permits reamer to be resharpened many times to its original diameter therefore saving on replacement costs. These reamers are NOT for reaming oversized holes. They may be expanded only for the purpose of regrinding to the original size. Misuse of these tools may cause damage to the tool, the workpiece and injury to the operator.

Hand reamers are made of high-speed steel and are generally used by hand for the final sizing of holes. The square on the shank is suitable for holding in a tap wrench or a vise depending on whether the reamer or the part is rotated. A long starting taper is ground into the reamer for easy entry and accurate alignment. The straight-flute hand reamer is recommended for most hand reaming applications. The spiral-flute hand reamer is recommended for applications where there is an interrupted cut such as a keyway.

## DWRRHDE Series - Straight Flute Hand Expansion Reamers DWRRHDES Series - Spiral Flute Hand Expansion Reamers

Hand Expansion Reamer are used to enlarge holes in order to get proper fit. Adjusting screw is tightened to get proper size.

## BRIDGE REAMERS

DWRRB Series - High Speed Spiral Flute Taper Shank DWRRBST Series - High Speed Straight Flute Taper Shank

Designed for hard service, these reamers are especially suitable for use in structural iron or steel bridgework and ship construction in lining up bolt or rivet holes. They have a sharp point and long taper for easy entry in badly misaligned holes. The taper shank bridge reamer is commonly used in electric and pneumatic portable equipment.

## NPTTAPER PIPEREAMERS

Taper pipe reamers are made with a taper of $3 / 4$ " per foot and are designed for reaming holes to be tapped with American Standard taper pipe taps. Taper reamer use prior to tapping with taper pipe taps provides threads of better quality and are recommended when tapping Dryseal, NPT, and Military Aeronautical Pipe Thread Specification, ANPT. The spiral fluted reamers have left hand spiral, right hand cutting flutes.

# TAPER PIN REAMERS 

DWRRTP Series - Straight Flute

## DWRRTPH Series - Helical Flute

DWRRTPS Series - Spiral Flute

#### Abstract

These tapered reamers turn a straight hole into a tapered hole into which standard taper pins will fit. The straight-flute and spiral-flute reamers are generally used by hand while the helical-flute is designed for machine use. The square on the shanks of the straight and spiral fluted are suitable for holding in a tap wrench or vise. The straight flute taper pin reamer is recommended for most materials. The spiralflute taper pin reamer is recommended for applications where the reamer tends to wedge itself. The Helical-flute Taper pin reamer has the geometry for reaming holes for tapered pins with a machine. The free cutting action at high speeds produces a good finish and minimizes chip packing in the flutes.

DMS Series
Variable pitch teeth allow for cutting thru any wood, metal or plastic. Can be used in a wide variety of applications.

# H.S.S. END MILLS 

DWCT Series
These end mills are designed to machine most materials of medium hardness such as steel, brass, bronze and iron. The large core diameter provides rigidity and reduces deflection while the cutting geometry allows for rapid stock removal. They can be used for general-purpose milling including profiling, slotting, keyways and pockets. They will also plunge cut.

Flat Files are used by machinists, machinery builders, ship and engine builders, repairmen and others who require rapid removal of metal. They are rectangular in cross section and taper slightly towards the point in both width and thickness. Double cut on both sides, single cut on both edges.

## FILES

Rounded on one side, flat on the other. Used on concave and convex as well as flat surfaces. The backs of all Half Round Bastard Files are double cut. The Backs of all Half Round Second Cut Files longer than 6 inches are double cut, the 4 and 6 inches files are single cut. The backs of all Half Round Smooth files are single cut. The flat sides of all Half Files are double cut.

## FILES

Three square Files are triangular in cross section, and are double cut and have fairly sharp comers that are slightly set and cut. These files are for general use by machinists for filing internal angles more than the right angle, for clearing out square comers and filing taps and cutters. Grading of cuts according to coarseness is same as Square File.

## ABRASIVES

## ALUMINUMOXIDECLOTH <br> (HANDY ROLLS)

ROLLS
qual Q TECH" $^{\prime \prime}$

Handy Rolls, made of high grade, resin-bonded, J-wt. Cloth material, are packaged 50 Yards per Roll. The flexibility of these cloth rolls allows for contour work. They come packaged in storage containers for easy dispensing.
