Our History

1946
Buyers Products Company founded by Sam Ruven and Bessie Kleinman as a distributor of driveline components.

1988
Buyers acquired Viking Forge in Streetsboro, Ohio with 6 complete forge lines. This facility manufactures our hitches, D-rings, and other towing and cargo parts.

1995
Buyers acquired Progressive Powder Coating, Inc. Our Nordson automatic powder application booth is used to powder coat our Buyers toolboxes and other truck and trailer accessories.

2004
Buyers acquired Romotech in New Paris, Indiana. Our Ferry Industries Rotospeed molding machines are used to manufacture our poly salt spreaders.

2009
Buyers began our operations at Boomerang Rubber, in Botkins, Ohio manufacturing mudflaps, wheel chocks and other rubber truck and trailer accessories.

Buyers continued to grow its product offerings and build valued relationships with customers and suppliers. Increased demand for products led to the pursuit of supply chain manufacturing solutions.

1992
Buyers acquired Trailer Components Manufacturing (Tracom) for CNC precision machining and tooling, as well as state-of-the-art welding.

2002
Buyers moved its corporate headquarters to a brand new 235,000 sq. ft. state-of-the-art office and distribution center.

2007
Buyers began manufacturing the SnowDogg stainless steel snowplow at our Mentor, Ohio facility.

2013
Buyers acquired an additional 500,000 sq. ft. manufacturing facility in Mentor, Ohio allowing for expansion of our aluminum and stainless steel manufacturing.

2016
Buyers establishes a 22,000 sq ft Engineering Tech Center in Mentor, Ohio. It's multi-use lab, design, training and prototyping space is dedicated to the research and development of innovative product

Our Corporate Family of Companies

TUBULAR VS. SOLID TRI-BALL DESIGNS

In load testing per SAE J684, the Buyers patent pending tubular design is equivalent or superior to the traditional solid design. This is possible because the 2-5/16" ball design allows it to pass through the complete shaft (see figure).

PROPER SAFETY CHAIN USE

Safety Chains act as the final connection between the towing vehicle and the trailer, in the event there is a failure in the towing hitch and/or the coupler.

Use one or two safety chains set to a length that will allow for the turning radius of the vehicle but will not drag on the ground when in operation. The safety chains must have a "holding" capacity of at least the total weight of the trailer and contents.

When applying the safety chain hook up, cross the chain(s) under the trailer tongue to ensure that the tongue will not drop to the ground in the event of a failure.

For full SAE safety chain specifications, refer to SAE J684 specifications and standards.
